DESCRIPTIVE ANALYSIS

Data Analysis and Visualization:

- **perform correlation analysis**
- **Grouping and aggregation**
- **visualize mean for different attributes**
- **Missing value analysis**

DATA PREPROCESSING

- **APPLIED LABEL ENCODING TO CATEGORICAL COLUMN.**
- **FILLED MISSING VALUES WITH THE MEAN IN COLUMNS:**
 1. **SORTINO**
 2. **ALPHA**
 3. **BETA**
 4. **SHARPE**

MACHINE LEARNING MODELING

Built Random Forest Regression models to predict mutual fund returns for different time periods (1yr, 3yr, 5yr).

RECOMMENDATION SYSTEM

Developed a recommendation system using cosine similarity to suggest similar mutual funds based on user input such as category, risk level, and returns. Implemented interactive widgets for users to input their preferences and receive recommendations for the best mutual funds.

NEED OF DASHBOARD

To understand this data and their patterns, then make predictions on the given data to forecast the future performance of specific mutual funds
